

CampusOption

A full-stack college discovery and lead generation platform — engineered to rival Shiksha.com, CollegeDunia, and CareerIndia — built ground-up with enterprise architecture at a small-business price.

PREPARED BY	LOCATION	DATE	VALID FOR

EXECUTIVE SUMMARY

What we built, and why it matters

CampusOption is not a template. It is not a boilerplate. It is a ground-up, hand-crafted platform engineered with the same patterns used by unicorn-scale product companies — a layered, modular, and production-hardened codebase designed to last five years without a rewrite.

What sets it apart is not just the breadth of features, but the *depth of engineering* — enterprise-grade security, 125+ granular permissions, polymorphic content, refresh-token rotation with reuse-attack detection, and a dynamic form builder that lets your team create leads pipelines without touching code.

"Features that exist nowhere else — at a price that exists nowhere else either."

BY THE NUMBERS

A platform built at scale

125+

Granular
permissions

20

Backend models

100+

REST endpoints

25+

Admin modules

54+

Frontend pages /
components

5

Content-section
editors

134

Person-days of
engineering

~35K

Lines of code
(TypeScript + JS)

Most platforms give you one. We give you all of it.

WHAT YOU USUALLY GET

- A single admin role (admin vs user)
- Hard-coded content and static pages
- Static forms, no flexibility
- Basic JWT without rotation
- Simple CRUD, one big controller file
- No search, no location filtering
- Leads as a flat list in a spreadsheet
- No audit log, no soft deletes

WHAT CAMPUSOPTION DELIVERS

- **125+ granular permissions** with a custom role builder
- **Polymorphic content engine** — 5 editors attachable to any entity
- **Drag-drop form builder** — create forms in minutes
- **Refresh-token rotation** with family-based reuse detection
- **Layered architecture** — Route → Controller → Service → Model
- **Geospatial (MongoDB 2dsphere)** indexing built in
- **Kanban pipeline** with priority, status, assignment, aging
- **Audit logs** + soft deletes on every sensitive model

Three pillars that most agencies skip

- **Security (Bank-Grade)**

JWT with 15-min access tokens, rotating refresh tokens, family-tracked reuse detection, bcrypt hashing, Joi validation on every endpoint, LRU permission cache, three-layer route guards, Winston + Morgan logging, soft deletes on sensitive entities.

- **Modularity**

Layered architecture — each layer replaceable. Feature-based frontend. Centralized query keys. Polymorphic content sections. Permission registry as single source of truth. TypeScript end-to-end. Zod + React Hook Form for runtime safety.

- **Testing & QA**

RBAC test suite validating 125+ permissions across every admin workflow. Security audit on JWT, password reset, privilege escalation, NoSQL injection. Cross-browser, responsive breakpoint testing. End-to-end lead flow verification. Stress-tested token rotation.

What students see

FEATURE	DESCRIPTION
Home & Hero Search	Landing page with featured colleges, categories, trust signals
College Listing	Filterable grid — type, category, city, state, fees, tier; full-text search; sorting & pagination
College Detail	Slug-based dynamic routing; multi-tab content; reviews & discussions
Course Listing & Detail	Course discovery with filters, related colleges, prerequisites
Exam Listing & Detail	Exam discovery, colleges accepting the exam, schedules
Compare Tool	Side-by-side comparison — fees, placements, rank, tier
Dynamic Pages	CMS-powered pages (About, Loan, Contact) rendered via slug
Dynamic Form Renderer	Any published form surfaces at /forms/:slug and captures leads
Reviews & Discussions	User-generated content with admin moderation
SEO	Per-entity meta, slugs, canonical URLs, OpenGraph — all editable

What your team controls

MODULE	CAPABILITY
Dashboard & Analytics	KPIs, Recharts visualizations — distribution by tier, state, fees
User Management	Create / edit / activate users, assign roles, reset passwords
Role & Permission	Create custom roles, bulk-assign from 125+ permissions
College CMS	Full create/edit/publish workflow, multi-tab content, media, geospatial coords
Course CMS	Full workflow with course-specific metadata
Exam CMS	Exam metadata + content sections
Content Section Editor	5 inline editors — Rich Text, Table, FAQ, Gallery, List
Category & City	Taxonomy + geographic master data
Form Builder	Drag-drop builder, 8+ field types, publish/unpublish
Form Submissions	View, filter, export all submissions
Lead Management	List + Kanban pipeline, priority tags, team assignment
Review Moderation	Approve / reject user reviews
Discussion Moderation	Moderate forum threads
Dynamic Page Builder	Slug-based CMS pages with content sections + SEO
SEO Manager	Per-entity meta, slug, canonical, structured data
Content Assignments	Scoped editorial permissions

Module	Capability
Site Settings	Global config — branding, integrations
Audit Logs	Track user actions for compliance

COMMERCIAL — MARKET COMPARISON

What this would cost elsewhere in Bangalore

Vendor Type	Typical Quote
Tier-1 Agency (Accenture-class)	₹18,00,000 – ₹28,00,000
Mid-tier Product Agency	₹12,00,000 – ₹16,00,000
Independent Senior Developer	₹9,00,000 – ₹12,00,000
CampusOption — Early Partner Price Our offer	₹6,50,000

Market value: ~~₹12,00,000 – ₹15,00,000~~

₹6,50,000

All-inclusive · No hidden charges · Full source-code ownership

★ You save ₹5,50,000 – ₹8,50,000

At ₹6.5 lakhs, this works out to roughly ₹4,850 per person-day — less than half of prevailing Bangalore rates for engineers of this calibre. We're offering this because we believe in long-term relationships over one-off wins.

How every rupee is spent

#	MODULE	PERSON-DAYS	COST
1	Architecture, DB design, repo setup	8	₹40,000
2	Authentication + RBAC + 125-permission registry	12	₹60,000
3	College / Course / Exam CMS + Content Sections	22	₹1,05,000
4	5 Content Editors (RichText, Table, FAQ, Gallery, List)	10	₹48,000
5	Dynamic Form Builder + Submission capture	10	₹48,000
6	Lead Management (List + Kanban pipeline)	8	₹38,000
7	Public pages — Listings, Detail, Compare, Search	18	₹87,000
8	Reviews + Discussions + Moderation	6	₹28,000
9	SEO Manager + Dynamic Pages + Slug routing	8	₹38,000
10	Analytics dashboard + Recharts visualizations	5	₹24,000
11	Site Settings + Audit Logs + User Profile	4	₹19,000
12	UI/UX polish, responsive design, Tailwind theming	10	₹48,000
13	Testing, security audit, bug fixes	8	₹38,000
14	Deployment, documentation, handover	5	₹29,000
Total		134 days	₹6,50,000

Separate from build cost — paid by client on own AWS account

The development cost above covers **only the engineering work**. Hosting the platform on AWS is a separate, recurring cost — paid directly by you on your own AWS account. This keeps billing transparency and full control with you.

One-time · Now

₹15,000

AWS Setup + 6 Months of Testing

Covers AWS account setup, EC2 + MongoDB Atlas provisioning, domain pointing, SSL, staging environment, and the **full cost of hosting for the first 6 months** while we test and iterate.

Recurring · After month 6

₹6K – ₹10K_{/mo}

Ongoing server cost — depends on traffic

- Low traffic (<10K monthly visitors): ~₹6,000/mo
- Medium traffic (10K–50K): ~₹8,000/mo
- Higher (50K+): ~₹10,000+/mo

WHAT'S INCLUDED IN THE AWS HOSTING

- EC2 instance (t3.small → t3.medium based on load)
- MongoDB Atlas (shared / M10 cluster)
- S3 for media uploads
- CloudFront CDN for faster delivery
- Route 53 DNS + SSL via ACM (free)
- Automated daily backups

DELIVERABLES

What you get, forever

- ✓ Complete source code (frontend + backend) in a Git repository — **full ownership transferred**
- ✓ MongoDB seed scripts — permissions, roles, super-admin, sample colleges/courses/exams
- ✓ Environment configuration guide (.env.example + deployment notes)
- ✓ Admin accounts + documented RBAC setup
- ✓ Deployed production build to client-provided hosting
- ✓ API documentation (endpoint list + auth flow)
- ✓ Handover session (2 hours) walking through codebase + admin panel
- ✓ **30 days of free post-launch support**

OPTIONAL — ANNUAL MAINTENANCE

Keep the engine tuned, post-launch

Basic ₹12,000 /mo Bug fixes, minor changes, up to 10 hrs/mo	Standard · Recommended ₹25,000 /mo Above + small features, 25 hrs/mo, priority support	Premium ₹50,000 /mo Above + dedicated dev time, 50 hrs/mo, SLA-backed
--	---	--

Seven reasons this deal is hard to beat

You own the code forever

No SaaS lock-in, no monthly bills compounding into crores over the years.

Enterprise build at small-business price

Save ₹5–8 lakhs versus any comparable Bangalore agency.

Security-first engineering

The kind of hardening you'd expect from a fintech — not a college portal.

Modular to its core

Adding a new entity takes hours, not weeks. Every layer is replaceable.

Features that don't exist elsewhere

Polymorphic content, 125-permission RBAC, form builder, Kanban pipeline — at this price? Nowhere.

Future-proof stack

React 19, TypeScript, modern patterns — no rewrite needed for 5+ years.

95% already built

Remaining work is polish, deployment, and handover — 2–3 weeks to launch.

Long-term partnership

We're in this for the next five years, not a one-time invoice.

TERMS & CONDITIONS

The fine print, kept readable

1. All prices are in Indian Rupees (INR).
2. Source-code ownership transfers to the client upon final payment.
3. Any feature outside the defined scope will be quoted and approved separately.
4. Hosting, domain, and third-party service subscriptions are borne by the client.
5. Response time during active development: within 24 business hours.
6. This proposal is valid for 30 days from the date of issue.
